

Pramo Jewels

AI Project Context

Document ID: PJ-AIPC-001
Version: 1.0
Status: Approved

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Provide AI assistants and developers with a comprehensive understanding of the project
Audience	AI Coding Assistants, Developers, Architects, QA, DevOps, Product Team
Version	1.0

Project Context Summary

Context Area	Description
Business Domain	Luxury jewellery e-commerce platform
Core Modules	Authentication, Catalog, Cart, Orders, Payments, Shipping, CMS, Analytics
Technology	Modern frontend, REST APIs, relational database, CI/CD
Architecture	Layered, modular, scalable and secure
Coding Standards	Consistent naming, testing, documentation and code review
Security	RBAC, encryption, audit logging, secure APIs
Deployment	Automated CI/CD with monitored production environments

Project Vision

Deliver a secure, scalable and premium digital jewellery shopping experience with maintainable enterprise-grade architecture.

AI Development Guidelines

AI-generated code must follow project architecture, coding standards, security policies, testing requirements and documentation practices.

Business Rules

Preserve pricing, inventory integrity, payment validation, customer privacy and operational workflows in every implementation.

Quality Expectations

Generate production-ready, readable, testable and well-documented code with minimal technical debt.

Knowledge Sources

Use approved project specifications, API contracts, database schema, security policies and architecture documents as the source of truth.

Collaboration

AI outputs should support developers without bypassing review, testing, approval or change-management processes.

Future Enhancements

Design solutions that are extensible for AI recommendations, personalization, multilingual support and advanced analytics.

Acceptance Criteria

AI-generated outputs align with project standards, integrate correctly with existing modules and require minimal rework during review.
