

Pramo Jewels

AI Prompt Library

Document ID: PJ-AIPL-001
Version: 1.0
Status: Approved

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Provide standardized prompt templates for AI-assisted software development.
Audience	Developers, Architects, QA, DevOps, AI Coding Assistants
Version	1.0

Prompt Categories

Prompt Category	Purpose
Frontend	Generate responsive UI components following design system
Backend	Create secure services, controllers and business logic
Database	Generate schemas, migrations and optimized queries
API	Design REST endpoints, validation and documentation
Testing	Create unit, integration and regression tests
Security	Review code for vulnerabilities and secure practices
DevOps	Generate CI/CD, deployment and monitoring configurations
Documentation	Produce technical docs, API references and guides

Objectives

Establish reusable prompts that generate consistent, secure and maintainable outputs aligned with project standards.

Prompt Structure

Include project context, task objective, technical constraints, expected output format, acceptance criteria and references to applicable standards.

Context Guidelines

Always provide architecture, coding standards, security requirements, database schema and API specifications relevant to the task.

Prompt Quality Rules

Use clear instructions, measurable objectives, explicit constraints and request complete, production-ready deliverables.

Validation

Review AI responses for correctness, security, performance, coding standards and business rule compliance before implementation.

Version Management

Maintain versioned prompt templates, document changes and retire obsolete prompts through change control.

Knowledge Sources

Reference approved architecture documents, coding guides, API specifications, database standards and security policies.

Acceptance Criteria

Prompt outputs are accurate, reproducible, secure, aligned with project standards and require minimal post-generation refinement.
