

Pramo Jewels

AI Master Context Document

Document ID: PJ-AIMC-001
Version: 1.0
Status: Approved

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Provide a single authoritative context document for AI-assisted development across the project lifecycle
Audience	AI Coding Assistants, Developers, Architects, QA, DevOps, Product Team
Version	1.0

Master Project Context

Context Area	Summary
Business	Premium jewellery e-commerce platform with secure customer experience
Architecture	Layered, modular, scalable architecture with REST APIs
Technology	Frontend, backend, relational database, CI/CD and monitoring
Core Modules	Auth, Catalog, Cart, Orders, Payments, Shipping, CMS, Analytics
Security	RBAC, encryption, audit logging, secure APIs and least privilege
Development	AI coding rules, UI, backend, database and API standards
Testing	Unit, integration, security, regression and UAT processes
Operations	Deployment, monitoring, maintenance and release management

Objectives

Provide AI systems with consistent project knowledge to generate secure, maintainable and production-ready deliverables.

Development Principles

Follow approved architecture, coding standards, business rules, security policies and documentation requirements for every generated artifact.

Reference Documents

Use architecture specifications, API documentation, database schema, security guides, testing plans and deployment documentation as the source of truth.

AI Workflow

Understand context → Generate solution → Validate against standards → Human review → Testing → Deployment.

Governance

All AI-generated outputs require traceability, peer review, version control and approval before production use.

Knowledge Maintenance

Update this master context whenever architecture, business requirements, technology stack or standards change.

Future Expansion

Support personalization, recommendation engines, multilingual capabilities, analytics and future AI services without breaking existing architecture.

Acceptance Criteria

AI-generated outputs consistently align with project objectives, integrate seamlessly with existing modules and comply with quality, security and operational standards.
