

Pramo Jewels

API Versioning Strategy

Document ID: PJ-APIVER-001
Version: 1.0
Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define API versioning, compatibility and lifecycle management
Audience	Backend Developers, Frontend Developers, Mobile Developers, Integration Partners
Version	1.0

Versioning Standards

Topic	Standard
Base Path	/api/v1
Version Style	URI path versioning
Content Type	application/json
Breaking Changes	Require new major version (v2, v3...)
Non-breaking Changes	Allowed within current version
Deprecation Notice	Minimum 6 months before removal
Sunset Header	Include planned retirement date
Documentation	Separate OpenAPI spec per version
Testing	Regression tests across supported versions

Versioning Principles

Maintain backward compatibility whenever possible. Introduce new endpoints or optional fields instead of changing existing behavior.

Lifecycle

Design → Preview → Stable → Deprecated → Sunset → Removed. Every stage must be documented and communicated.

Deprecation Policy

Deprecated endpoints continue to function during the notice period. Responses should include deprecation and sunset headers where applicable.

Client Compatibility

Frontend, mobile apps and third-party integrations should declare the API version they support and be tested before upgrading.

Change Management

Breaking changes require architecture review, release notes, migration guide, SDK updates and stakeholder approval.

Security

Security patches may be applied to all supported versions. Unsupported versions should no longer receive fixes after the sunset date.

Documentation

Maintain changelogs, migration guides, sample requests/responses and OpenAPI documentation for every supported version.

Governance

The Architecture Review Board approves new API versions and retirement schedules.
