

Pramo Jewels

Inventory Dashboard Specification

Document ID: PJ-IDS-001

Version: 1.0

Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the inventory dashboard features, KPIs and operational workflows.
Audience	Inventory Managers, Warehouse Team, Operations, Developers, QA
Version	1.0

Core Inventory Dashboard Modules

Dashboard Module	Capabilities
Inventory Overview	Total SKUs, stock value, available stock and reserved stock
Low Stock Alerts	Threshold-based notifications and replenishment suggestions
Stock Movements	Inbound, outbound, adjustments and transfers
Warehouse Status	Stock by warehouse, bin and storage location
Purchase & Restocking	Pending purchase orders and restock recommendations
Returns Inventory	Restocked, quarantined and damaged items
Reports	Inventory aging, turnover and valuation reports
Search & Filters	SKU, category, warehouse, supplier and stock status

Dashboard Widgets

Display KPI cards for total inventory value, available stock, reserved stock, low-stock items, out-of-stock products, incoming shipments and warehouse utilization.

Business Rules

Inventory updates occur in real time from sales, returns, adjustments and warehouse operations. Low-stock thresholds are configurable per SKU or category.

Inventory Operations

Support stock adjustments, transfers, cycle counts, barcode/SKU lookup, bulk updates and approval workflows for manual corrections.

Analytics

Provide stock turnover, aging analysis, dead stock identification, demand trends and replenishment forecasts.

Security

Restrict inventory actions through RBAC, require approval for sensitive adjustments and maintain immutable audit logs for stock changes.

Performance

Use cached aggregate metrics, lazy loading, server-side pagination and asynchronous report generation for large inventories.

Integrations

Integrates with Product Management, Orders, Warehouse, Shipping, Procurement, Analytics, Notifications and Audit Logging.

Acceptance Criteria

Dashboard data remains accurate, inventory updates synchronize correctly, alerts trigger on time and all stock operations are fully traceable.
