

Pramo Jewels

Typography Guide

Document ID: PJ-TYPO-001
Version: 1.0
Status: Draft

Field	Value
Project	Pramo Jewels Brand Identity
Purpose	Define typography standards across all brand touchpoints
Audience	Designers, Developers, Marketing Team, AI Design Agents
Version	1.0

1. Typography Philosophy

Typography should communicate luxury through clarity, balance and restraint. Text should never compete with the jewellery; it should support the overall premium experience.

2. Primary Typeface

Elegant high-contrast serif typeface for headings, hero sections, branding and premium marketing materials. Suggested families: Canela, Cormorant Garamond, or Playfair Display (depending on licensing).

3. Secondary Typeface

Modern sans-serif typeface for body copy, navigation, buttons and interface elements. Suggested families: Inter, Manrope or General Sans.

4. Hierarchy

Heading 1 – Hero headlines
Heading 2 – Section titles
Heading 3 – Card headings
Body – General content
Caption – Metadata and helper text
Button – Action labels

5. Font Weights

Headings: Medium to SemiBold
Body: Regular
Buttons: Medium
Avoid excessively bold typography.

6. Spacing Rules

- Generous line height for readability.
- Consistent letter spacing.
- Maintain ample white space around headings.
- Avoid tightly packed text blocks.

7. Alignment

Use left alignment for most content. Center alignment is reserved for hero sections, premium banners and selected marketing assets.

8. Responsive Typography

Use fluid typography so text scales smoothly across desktop, tablet and mobile devices while preserving hierarchy and readability.

9. Accessibility

- Meet WCAG contrast requirements.
- Minimum readable font sizes.
- Avoid using all-uppercase for long paragraphs.
- Ensure adequate spacing for readability.

10. Usage Guidelines

Do:

- Use only approved font families.
- Maintain hierarchy consistently.
- Keep typography minimal and elegant.

Don't:

- Mix multiple font families unnecessarily.
- Overuse decorative fonts.
- Stretch or distort text.

11. Digital Applications

Apply typography consistently across the website, dashboards, emails, mobile applications, social media graphics and marketing campaigns.

12. Print Applications

Use the same typography principles for packaging, jewellery certificates, invoices, business cards, catalogues and promotional materials.
