

Pramo Jewels

UI/UX Design System

Document ID: PJ-DS-001
Version: 1.0
Status: Draft

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define reusable UI components, UX principles and interface standards
Audience	Designers, Frontend Developers, QA, AI Coding Agents
Version	1.0

1. Design Philosophy

Create a calm, premium and immersive shopping experience where the jewellery is the hero. Every interaction should feel intentional, elegant and effortless.

2. Core Principles

- Minimal interface
- Consistent components
- Accessibility-first
- Responsive by default
- Smooth motion with purpose
- 3D only where it enhances product presentation

3. Layout System

- 12-column responsive grid
- 8px spacing system
- Max content width: 1440px
- Generous white space and consistent margins

4. Navigation

- Sticky transparent header
- Mega menu for collections
- Search with predictive suggestions
- Breadcrumb navigation on inner pages

5. Component Library

Buttons (Primary, Secondary, Ghost)
Input fields
Dropdowns
Checkboxes & Radio buttons
Cards

Product tiles
Modals
Drawers
Tabs
Accordions
Tables
Badges
Pagination

6. Product Experience

- Large hero imagery
- 360° viewer placeholder
- Zoom gallery
- Variant selectors
- Wishlist toggle
- Related products

7. Forms & Validation

- Inline validation
- Helpful error messages
- Required field indicators
- OTP and checkout flows with progress indicators

8. States

Loading skeletons
Empty states
Success messages
Warning dialogs
Error screens
Offline notification

9. Motion & Interaction

- 250–500 ms transitions
- Subtle hover elevation
- Gentle fade/slide reveals
- Smooth scrolling
- Avoid excessive bounce effects

10. Responsive Design

Desktop, tablet and mobile layouts must share the same design language while adapting navigation, spacing and content density appropriately.

11. Accessibility

- WCAG 2.2 AA target
- Keyboard navigation

- Visible focus states
- Screen reader labels
- Color-independent feedback

12. Design Governance

All new UI components must be added to the design system before implementation. Changes require review to maintain consistency across the platform.
