

Pramo Jewels

Non-Functional Requirements (NFR)

Document ID: PJ-NFR-001

Version: 1.0

Status: Draft

Field	Value
Project	Pramo Jewels Premium E-commerce Platform
Purpose	Define quality attributes and operational constraints
Audience	Business, Development, QA, DevOps, Security Teams
Version	1.0

1. Purpose

Define the quality standards, performance expectations and operational characteristics that the Pramo Jewels platform must satisfy.

2. Performance

- Homepage target load time under 3 seconds.
- API response target under 500 ms for common requests.
- Smooth 60 FPS animations where supported.
- Lazy loading for images and 3D assets.

3. Availability & Reliability

- Target availability: 99.9%.
- Automated backups.
- Graceful error handling.
- Recovery from unexpected failures.

4. Scalability

- Support increasing product catalogue and customer base.
- Modular architecture.
- Horizontal scaling capability for future growth.

5. Security

- HTTPS everywhere.
- Password hashing.
- CSRF, XSS and SQL Injection protection.
- Role-Based Access Control.
- Secure session management.
- Audit logging.

6. Usability

- Responsive design for desktop, tablet and mobile.
- Intuitive navigation.
- Consistent UI components.
- Premium user experience with subtle animations.

7. Accessibility

- Follow WCAG 2.2 AA guidelines.
- Keyboard navigation.
- Proper contrast ratios.
- Screen reader compatibility.

8. Maintainability

- Clean code architecture.
- Reusable components.
- Comprehensive documentation.
- Version control with Git.

9. Compatibility

- Latest Chrome, Edge, Firefox and Safari.
- Android and iOS mobile browsers.
- Progressive enhancement for older browsers where practical.

10. SEO

- Semantic HTML.
- Structured data.
- Optimized metadata.
- XML sitemap and robots.txt.

11. Compliance

- Privacy policy and terms support.
- Secure payment practices.
- GST-ready order information.
- Data protection best practices.

12. Monitoring & Logging

- Application logging.
- Error monitoring.
- Performance monitoring.
- Security event logs.

13. Acceptance Criteria

- Lighthouse Performance ≥ 95 (target).
- No critical security vulnerabilities before release.
- Responsive across supported devices.
- Successful backup and recovery verification.
