

Pramo Jewels

Database Schema

Document ID: PJ-DBSCHEMA-001
Version: 1.0
Status: Draft

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define database tables, key columns, relationships and constraints
Audience	Backend Developers, DBAs, Architects
Version	1.0

Core Tables

Table	Primary Columns
users	id(PK), role_id(FK), first_name, last_name, email(UQ), phone(UQ), password_hash, status, created_at, updated_at
roles	id(PK), name(UQ), description
addresses	id(PK), user_id(FK), type, line1, line2, city, state, postal_code, country, is_default
categories	id(PK), parent_id(FK), name, slug(UQ), status
products	id(PK), category_id(FK), sku(UQ), name, metal_type, purity, price, stock_status, description
product_images	id(PK), product_id(FK), image_url, sort_order
inventory	id(PK), product_id(FK), quantity, reserved_quantity
wishlists	id(PK), user_id(FK), product_id(FK), created_at
carts	id(PK), user_id(FK), status
cart_items	id(PK), cart_id(FK), product_id(FK), quantity, unit_price
orders	id(PK), user_id(FK), address_id(FK), order_number(UQ), total_amount, order_status
order_items	id(PK), order_id(FK), product_id(FK), quantity, unit_price
payments	id(PK), order_id(FK), method, transaction_ref(UQ), status, paid_at
shipments	id(PK), order_id(FK), courier_name, tracking_number(UQ), status
reviews	id(PK), user_id(FK), product_id(FK), rating, review_text
coupons	id(PK), code(UQ), type, value, start_date, end_date
notifications	id(PK), user_id(FK), channel, title, message, read_at
audit_logs	id(PK), actor_id(FK), action, entity, entity_id, ip_address, created_at

Relationships

Foreign keys enforce integrity between users, orders, products, categories, addresses, payments, shipments and reviews. Junction tables support cart and order line items.

Indexes

Create indexes on email, phone, sku, slug, order_number, tracking_number, transaction_ref, category_id, product_id and frequently filtered status columns.

Constraints

Unique keys on business identifiers, positive numeric checks for prices and quantities, cascading updates where appropriate and restricted deletes for financial records.

Audit & Soft Deletes

Operational tables should include created_at and updated_at. Soft deletes are recommended for products, categories and customer-managed entities where recovery is required.

Migration Standards

Implement each table using Laravel migrations with explicit foreign keys, indexes and seeders. Version all schema changes in source control.
