

Pramo Jewels

Deployment Guide

Document ID: PJ-DPG-001

Version: 1.0

Status: Approved for Deployment

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the deployment process, environment preparation and production releases
Audience	DevOps Engineers, Developers, System Administrators, QA, Release Managers
Version	1.0

Deployment Workflow

Deployment Stage	Activities
Pre-Deployment	Code freeze, approvals, backups, release validation
Environment Setup	Provision infrastructure, configure secrets and services
Application Deployment	Deploy frontend, backend, database migrations
Verification	Smoke tests, health checks, API validation
Production Release	Enable traffic and monitor key services
Rollback	Restore previous version if critical issues occur
Post-Deployment	Performance monitoring, log review, stakeholder confirmation
Documentation	Release notes and deployment records

Objectives

Deploy new releases safely with minimal downtime while ensuring system stability and data integrity.

Environment Strategy

Maintain separate Development, QA, Staging and Production environments with consistent configuration management.

Deployment Process

Build → Test → Package → Deploy → Execute Database Migrations → Verify → Monitor → Release Confirmation.

Rollback Strategy

Maintain versioned releases, database backups and rollback procedures for rapid recovery from deployment failures.

Monitoring

Track application health, infrastructure metrics, logs, API performance, error rates and business KPIs immediately after deployment.

Security

Protect deployment credentials, enforce least-privilege access, use encrypted secrets and maintain deployment audit logs.

Integrations

Integrates with CI/CD pipelines, Version Control, Monitoring, Logging, Notification System and Incident Management.

Acceptance Criteria

Deployment completes successfully, smoke tests pass, monitoring shows healthy services and stakeholders approve production release.
