

Pramo Jewels

CI/CD Pipeline Documentation

Document ID: PJ-CICD-001

Version: 1.0

Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the Continuous Integration and Continuous Deployment pipeline architecture
Audience	DevOps Engineers, Developers, QA, Release Managers, System Administrators
Version	1.0

CI/CD Pipeline Overview

Pipeline Stage	Activities
Source Control	Branching strategy, pull requests, code reviews
Continuous Integration	Build, linting, unit tests, static analysis
Artifact Management	Package versioning and artifact storage
Quality Gates	Security scans, code coverage, approval checks
Continuous Deployment	Deploy to Dev, QA, Staging and Production
Verification	Smoke tests, health checks and rollback validation
Monitoring	Pipeline metrics, notifications and deployment status
Maintenance	Pipeline updates, secrets rotation and audit logs

Objectives

Automate build, test and deployment activities while improving software quality, consistency and release frequency.

Branching Strategy

Use feature branches, pull requests, protected main branch and release tags with mandatory code review.

Pipeline Workflow

Commit → Build → Static Analysis → Automated Tests → Security Scan → Package → Deploy → Smoke Test → Approval → Production Release.

Deployment Strategy

Support automated environment promotion, blue/green or rolling deployments where applicable and controlled production releases.

Security

Protect secrets using secure vaults, enforce least-privilege access, sign artifacts and audit pipeline activities.

Monitoring

Track build success rate, deployment frequency, lead time, change failure rate, rollback frequency and pipeline duration.

Integrations

Integrates with Git repository, CI server, artifact repository, container registry, monitoring, notifications and issue tracking.

Acceptance Criteria

Pipeline executes successfully, automated quality gates pass, deployments are reproducible and releases are fully traceable.
