

Pramo Jewels

Environment Configuration

Document ID: PJ-ENV-001
Version: 1.0
Status: Approved for Deployment

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define configuration standards for Development, QA, Staging and Production environments
Audience	DevOps Engineers, Developers, QA, System Administrators
Version	1.0

Environment Configuration Matrix

Environment	Configuration
Development	Local development, debugging enabled, mock/test services
QA	Shared testing environment with production-like settings
Staging	Pre-production replica with release candidate deployments
Production	Highly available, secure, optimized configuration
Secrets	Environment variables and secure secret management
Database	Dedicated databases with migration/version control
Storage	Object storage, backups and CDN integration
Monitoring	Logging, metrics, alerts and health checks

Objectives

Ensure consistent, secure and reproducible application behavior across all deployment environments.

Configuration Management

Manage environment variables, feature flags, application settings and infrastructure configuration through version-controlled processes.

Security

Encrypt secrets, restrict administrative access, enforce HTTPS, rotate credentials regularly and audit configuration changes.

Deployment

Promote identical application artifacts between environments while changing only environment-specific configuration.

Validation

Verify connectivity, services, migrations, cache, queues, storage and external integrations after deployment.

Disaster Recovery

Maintain backups, recovery procedures and environment rebuild documentation.

Integrations

Integrates with CI/CD, Secret Management, Monitoring, Logging, Database, CDN and DNS services.

Acceptance Criteria

All environments are correctly configured, validated, documented and capable of supporting planned release activities.
