

Pramo Jewels

Monitoring & Logging

Document ID: PJ-ML-001
Version: 1.0
Status: Approved for Deployment

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define monitoring, logging, alerting and observability standards for production o
Audience	DevOps Engineers, SRE Team, Developers, System Administrators
Version	1.0

Monitoring & Logging Scope

Area	Coverage
Infrastructure Monitoring	CPU, memory, disk, network and server health
Application Monitoring	API latency, error rates, throughput and uptime
Database Monitoring	Query performance, connections and replication
Centralized Logging	Application, server, audit and security logs
Alerting	Threshold, anomaly and availability alerts
Tracing	Distributed request tracing across services
Dashboards	Operational, business and SLA dashboards
Retention	Log rotation, archival and compliance retention

Objectives

Provide complete visibility into system health, performance, security events and business operations while enabling rapid incident response.

Logging Strategy

Collect structured logs from applications, infrastructure and integrations with centralized aggregation, indexing and searchable storage.

Alerting Strategy

Generate alerts for service failures, high latency, resource exhaustion, security events and failed business workflows with escalation policies.

Observability

Correlate metrics, logs and traces to accelerate root-cause analysis and improve operational reliability.

Security

Protect log integrity, restrict access using RBAC, redact sensitive data and audit administrative access to monitoring systems.

Operations

Review dashboards daily, validate backup of log storage, test alerts regularly and tune thresholds to reduce false positives.

Integrations

Integrates with CI/CD, Incident Management, Notification Services, Authentication, Infrastructure Monitoring and Audit Logging.

Acceptance Criteria

Monitoring covers all critical services, alerts are actionable, logs are retained according to policy and observability supports rapid troubleshooting.
