

Pramo Jewels

Release Management Guide

Document ID: PJ-RMG-001

Version: 1.0

Status: Approved for Operations

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the release planning, approval, deployment and post-release management
Audience	Release Managers, DevOps, Developers, QA, Product Owners, Operations
Version	1.0

Release Lifecycle

Release Phase	Activities
Planning	Scope, timeline, risk assessment, release calendar
Development	Feature completion, code review, branch management
Validation	QA, regression, security, performance and UAT
Approval	Business, QA and technical sign-offs
Deployment	Production deployment, smoke tests and monitoring
Post-Release	Hypercare, issue tracking and stakeholder communication
Rollback	Recovery procedures for failed releases
Closure	Release notes, metrics and retrospective

Objectives

Deliver predictable, low-risk software releases through standardized planning, governance and deployment practices.

Release Types

Support major, minor, patch, hotfix and emergency releases with defined approval workflows and communication plans.

Change Control

Every release follows formal change management, impact assessment, CAB approval where required and documented rollback procedures.

Communication

Notify stakeholders before, during and after releases with maintenance windows, release notes and incident updates when applicable.

Metrics

Track deployment frequency, lead time, change failure rate, MTTR, rollback frequency and release success rate.

Security

Verify security approvals, dependency scans, signed artifacts, access controls and audit trails before production deployment.

Integrations

Integrates with CI/CD, Version Control, Issue Tracking, Monitoring, Incident Management and Service Desk.

Acceptance Criteria

Release is approved, deployed successfully, validated in production, documented and formally closed.
