

Pramo Jewels

Product Management Specification

Document ID: PJ-PMS-001

Version: 1.0

Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define functional and technical specifications for product catalog management
Audience	Product Managers, Backend Developers, Frontend Developers, QA, Admin Team
Version	1.0

Core Product Management Modules

Module	Key Capabilities
Product Catalog	Create, edit, archive and publish products
Categories	Hierarchical categories and collections
Inventory	Stock quantity, availability, low-stock alerts
Media	Multiple images, videos, 360°/3D assets
Pricing	Base price, offers, discounts and scheduled pricing
Attributes	Metal, purity, weight, size, gemstone, SKU
SEO	Slug, meta title, meta description, schema markup
Search	Filters, sorting and keyword search
Reviews	Ratings, moderation and publishing
Admin Workflow	Draft → Review → Publish → Archive

Product Data Model

Each product includes SKU, name, slug, category, collection, description, metal type, purity, weight, dimensions, pricing, stock status, media assets and SEO metadata.

Lifecycle

Draft → Internal Review → Approved → Published → Updated → Archived. All state changes are audit logged.

Inventory Rules

Prevent overselling through stock reservation during checkout, configurable low-stock thresholds and inventory reconciliation after payment or cancellation.

Media Standards

Support high-resolution images, optimized web formats, videos and optional interactive 3D models for premium jewellery visualization.

Validation Rules

SKU and slug must be unique. Mandatory fields include category, price, media, metal type and stock configuration.

Roles & Permissions

Inventory Managers manage products. Admins approve publishing. Super Admins configure catalog settings and attributes.

Integration

Synchronize with search indexing, recommendation engine, order management, analytics, shipping and marketing modules.

Performance

Use image optimization, CDN delivery, caching, pagination and lazy loading for fast catalog browsing.

Acceptance Criteria

Products can be managed end-to-end, inventory remains accurate, SEO metadata is generated, and catalog changes are traceable through audit logs.
