

Pramo Jewels

Order Management Specification

Document ID: PJ-OMS-001

Version: 1.0

Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the complete order lifecycle, processing rules and integrations
Audience	Backend Developers, Admin Team, Operations, QA
Version	1.0

Order Management Modules

Module	Capabilities
Order Creation	Create order from validated cart
Payment Validation	UPI, COD and future payment methods
Order Status	Pending, Confirmed, Packed, Shipped, Delivered, Cancelled, Returned, Refunded
Invoices	Automatic invoice generation
Returns & Refunds	Return requests, approval and refund workflow
Shipment Tracking	Courier integration and tracking updates
Notifications	Email, SMS and WhatsApp status updates
Audit Trail	Complete order history and activity log

Order Lifecycle

Cart → Checkout → Payment Verification → Order Confirmed → Packed → Shipped → Delivered → Completed. Alternate paths include Cancellation, Return and Refund.

Business Rules

Reserve inventory during checkout, create unique order numbers, verify payment before fulfillment (except COD), prevent duplicate orders using idempotency.

Status Management

Every status transition records timestamp, actor and remarks. Customers can only cancel within allowed business rules.

Returns & Refunds

Support return requests, inspection, approval, replacement or refund. Refund status synchronizes with payment provider.

Notifications

Automatically notify customers on confirmation, shipment, delivery, cancellation, refund and return updates.

Integrations

Integrate with inventory, payment gateway, courier partner, notifications, analytics and accounting modules.

Performance

Queue non-blocking tasks such as invoice generation, emails, SMS and webhook processing for scalability.

Roles & Permissions

Customers manage their own orders. Admins process orders. Support manages returns. Super Admin configures workflows.

Acceptance Criteria

Every order is fully traceable, inventory remains synchronized, payments reconcile correctly and all lifecycle events are audit logged.
