Document ID: PJ-CPR-001
Version: 1.0
Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define business rules for coupons, promotional campaigns and discount calculation
Audience	Product Team, Marketing Team, Developers, QA, Admin Team
Version	1.0

Promotion Types

Promotion Type	Example Rules
Percentage Discount	10% OFF up to \$2,000
Fixed Amount	\$500 OFF above \$10,000
Free Shipping	Eligible above minimum order value
Festival Campaign	Date/time based offers
First Order	One-time use for new customers
Category Specific	Applicable only to selected collections
Referral	Reward after successful referral purchase
Loyalty	Tier-based member discounts

Coupon Rules

Each coupon has a unique code, validity period, usage limits, minimum order value, eligible products/categories and customer eligibility criteria.

Validation Workflow

Validate code → Verify expiry → Check eligibility → Confirm usage limits → Calculate discount → Apply to cart → Record redemption.

Stacking Policy

Only one coupon per order unless explicitly configured. Automatic promotions follow priority rules defined by administrators.

Discount Calculation

Apply discounts before shipping unless campaign rules specify otherwise. Taxes are calculated according to applicable business rules.

Administration

Admins can create, edit, schedule, activate, deactivate and archive promotions. Every change is audit logged.

Fraud Prevention

Prevent duplicate redemption, enforce per-user limits, detect abnormal usage patterns and validate all coupons server-side.

Integration

Integrates with Cart, Checkout, Orders, Payments, Customer Accounts, Analytics and Notification modules.

Reporting

Track impressions, redemption rate, revenue impact, average order value, campaign ROI and coupon misuse attempts.

Acceptance Criteria

Only eligible discounts are applied, calculations remain accurate, campaigns execute on schedule and all coupon activity is fully traceable.
