

Pramo Jewels

Issue Tracker

Document ID: PJ-ITR-001
Version: 1.0
Status: Approved

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the standardized process for recording, tracking, prioritizing and resolving issues.
Audience	Project Managers, Developers, QA Engineers, DevOps, Product Owners, Support Team
Version	1.0

Issue Tracking Framework

Issue Area	Tracking Requirements
Issue Identification	Unique ID, title, description and reporter
Classification	Bug, enhancement, task, risk or support issue
Prioritization	Critical, High, Medium and Low priority
Assignment	Owner, team, due date and dependencies
Lifecycle	Open → In Progress → Review → Resolved → Closed
Verification	QA validation and stakeholder confirmation
Reporting	Dashboards, aging reports and trend analysis
Audit	History of updates, comments and status changes

Objectives

Provide complete visibility into project issues while ensuring timely resolution and accountability.

Issue Workflow

Capture → Classify → Prioritize → Assign → Investigate → Resolve → Verify → Close.

Severity & Priority

Evaluate business impact, technical impact, urgency and customer effect before assigning priority.

Escalation

Escalate blocked, overdue or critical issues to project leadership with documented action plans.

Metrics

Track open issues, resolution time, SLA compliance, reopened issues, backlog size and defect trends.

Communication

Share issue status through sprint reviews, daily stand-ups, release meetings and stakeholder reports.

Integration

Integrates with Sprint Planning, CI/CD, Testing, Release Management, Risk Register and Monitoring tools.

Acceptance Criteria

All issues are traceable, assigned, prioritized, resolved, verified and documented before project closure or release.
