

Pramo Jewels

Change Log

Document ID: PJ-CL-001
Version: 1.0
Status: Approved

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the process for recording, tracking and approving project changes throughout the project lifecycle.
Audience	Project Managers, Developers, QA, DevOps, Product Owners, Stakeholders
Version	1.0

Change Management Framework

Change Area	Recorded Information
Change Identification	Unique ID, title, description and requester
Impact Analysis	Business, technical, schedule and cost impact
Approval	Approver, decision date and approval status
Implementation	Assigned owner, implementation plan and timeline
Verification	Testing results and validation evidence
Version Control	Affected release, version and commit reference
Audit Trail	History of updates, comments and approvals
Closure	Completion date and final status

Objectives

Maintain complete traceability of all approved project changes while preserving quality, compliance and governance.

Change Workflow

Request → Impact Assessment → Review → Approval → Implementation → Testing → Documentation → Closure.

Change Classification

Categorize changes as defect fixes, enhancements, configuration updates, security patches, infrastructure changes or documentation updates.

Review & Approval

Require technical review, business approval and change control before implementation in production.

Metrics

Track change success rate, approval time, implementation time, rollback frequency and post-release defects.

Communication

Notify stakeholders of approved changes, release schedules and implementation outcomes.

Integration

Integrates with Version Control, Issue Tracker, Sprint Planning, CI/CD Pipeline, Release Management and Audit Logging.

Acceptance Criteria

Every change is documented, approved, implemented, verified, versioned and archived with a complete audit trail.
