

Pramo Jewels

Regression Testing Plan

Document ID: PJ-RTP-001

Version: 1.0

Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the regression testing scope, execution strategy and release validation p
Audience	QA Engineers, Developers, DevOps, Product Owners, Release Managers
Version	1.0

Regression Test Coverage

Regression Area	Coverage
Authentication	Login, registration, password reset, sessions
Catalog	Products, categories, search, filters
Cart & Checkout	Cart, coupons, checkout flow
Payments	UPI, cards, COD, refunds
Orders	Placement, tracking, cancellation, returns
Admin	Dashboard, products, reports, permissions
Integrations	Payment, courier, notifications, APIs
Automation	Smoke, critical-path and full regression suites

Objectives

Ensure new features, bug fixes and configuration changes do not introduce regressions into existing functionality.

Execution Strategy

Run smoke regression on every build, targeted regression after feature changes and full regression before release.

Suite Management

Maintain modular regression suites, prioritize critical business flows and update test cases after approved requirement changes.

Entry & Exit Criteria

Begin after stable deployment to QA. Complete when all critical regression tests pass and blocking defects are resolved.

Automation

Automate repetitive regression scenarios and execute them through the CI/CD pipeline with detailed reporting.

Reporting

Track pass rate, failed cases, recurring defects, execution duration, automation coverage and release readiness.

Risk Management

Prioritize checkout, payments, authentication, inventory synchronization and third-party integrations for every release.

Acceptance Criteria

Regression suite passes, critical defects are closed, evidence is archived and stakeholders approve the release.
