

# Pramo Jewels

## User Acceptance Testing (UAT) Plan

Document ID: PJ-UAT-001

Version: 1.0

Status: Approved for Development

| Field    | Value                                                                   |
|----------|-------------------------------------------------------------------------|
| Project  | Pramo Jewels Premium E-Commerce Platform                                |
| Purpose  | Define the business validation process before production deployment.    |
| Audience | Business Stakeholders, Product Owners, QA, Developers, UAT Participants |
| Version  | 1.0                                                                     |

### UAT Validation Scope

| UAT Area         | Validation Scope                                    |
|------------------|-----------------------------------------------------|
| Customer Journey | Registration, login, browsing, wishlist, checkout   |
| Orders           | Placement, payment, tracking, cancellation, returns |
| Admin Operations | Products, inventory, reports, CMS                   |
| Payments         | UPI, cards, COD, refunds                            |
| Shipping         | Dispatch, tracking, delivery updates                |
| Notifications    | Email, SMS, WhatsApp and push alerts                |
| Business Rules   | Coupons, loyalty, pricing and taxes                 |
| Reporting        | Dashboards and business reports                     |

### Objectives

Confirm that the platform satisfies business requirements and supports real-world operational workflows before production release.

### Environment

Execute UAT in a production-like staging environment using representative business data and user accounts.

### Execution Workflow

Prepare Environment → Execute Business Scenarios → Record Results → Log Defects → Retest → Business Sign-off.

### Roles & Responsibilities

Business users execute scenarios, QA coordinates testing, developers resolve defects and product owners approve outcomes.

## **Entry & Exit Criteria**

Begin after successful system/regression testing. Complete when agreed business scenarios pass and critical issues are resolved.

## **Defect Management**

Log findings with business impact, assign ownership, verify fixes and maintain traceability to business requirements.

## **Reporting**

Provide daily progress, defect summaries, scenario completion, sign-off status and release recommendation.

## **Acceptance Criteria**

All critical business workflows pass, stakeholders approve results, documentation is complete and production deployment is authorized.
