

Pramo Jewels

Vulnerability Management Plan

Document ID: PJ-VMP-001

Version: 1.0

Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the lifecycle for identifying, assessing, remediating and monitoring security
Audience	Security Team, Developers, DevOps, QA, Operations
Version	1.0

Severity & SLA Matrix

Severity	Target Response	Target Remediation
Critical	Within 4 hours	Within 24 hours
High	Within 1 business day	Within 3 business days
Medium	Within 3 business days	Within 14 days
Low	Within 5 business days	Next planned release

Lifecycle

Discovery → Validation → Risk Assessment → Prioritization → Remediation → Verification → Closure → Continuous Monitoring.

Discovery Sources

Automated vulnerability scanners, dependency scanning, SAST, DAST, penetration tests, code reviews, infrastructure scans, bug reports and security advisories.

Risk Assessment

Prioritize issues using CVSS, exploitability, business impact, affected assets and data sensitivity.

Remediation

Assign owners, create tracked work items, apply patches, update dependencies, improve configurations and document compensating controls where immediate fixes are not possible.

Verification

Retest every resolved vulnerability to confirm remediation and ensure no regressions are introduced.

Monitoring

Continuously monitor production systems, third-party libraries, operating systems and cloud infrastructure for newly disclosed vulnerabilities.

Reporting

Maintain dashboards showing open findings, remediation progress, SLA compliance, recurring issues and trend analysis.

Governance

Conduct quarterly security reviews, annual penetration testing, post-incident reviews and maintain an exception approval process for accepted risks.
