

Pramo Jewels

Incident Response Plan

Document ID: PJ-IRP-001
Version: 1.0
Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the process for detecting, responding to and recovering from security incidents
Audience	Security Team, DevOps, Developers, Operations, Management
Version	1.0

Incident Classification

Incident Severity	Examples	Target Initial Response
Critical	Data breach, ransomware, production compromise	Within 30 minutes
High	Payment failures, privilege abuse	Within 2 hours
Medium	Application vulnerability, service degradation	Within 1 business day
Low	Minor policy violations, informational alerts	Next business day

Response Lifecycle

Preparation → Detection → Triage → Containment → Eradication → Recovery → Post-Incident Review → Continuous Improvement.

Roles & Responsibilities

Security Lead coordinates response, DevOps handles infrastructure, Developers remediate application issues, Management oversees communication and approvals.

Detection Sources

Monitoring systems, SIEM, application logs, WAF alerts, vulnerability scanners, customer reports, payment gateway notifications and cloud alerts.

Containment

Isolate affected systems, revoke compromised credentials, block malicious traffic, disable impacted integrations when necessary and preserve evidence.

Recovery

Restore validated backups if required, verify system integrity, monitor closely after restoration and return services to production in a controlled manner.

Communication

Maintain an internal incident log, notify stakeholders based on severity and coordinate any required customer or regulatory communications.

Evidence & Forensics

Preserve logs, timestamps, affected assets and configuration snapshots. Maintain chain of custody for forensic investigations.

Post-Incident Review

Document root cause, timeline, business impact, corrective actions, lessons learned and preventive improvements.

Testing & Governance

Conduct tabletop exercises twice a year, review the plan annually and update after major incidents or infrastructure changes.
