

Pramo Jewels

Credit/Debit Card Payment Flow

Document ID: PJ-CCF-001

Version: 1.0

Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define the end-to-end credit/debit card payment workflow and security requirements
Audience	Backend Developers, Payment Team, QA, DevOps, Security Team
Version	1.0

Card Payment Lifecycle

Stage	Description
1. Checkout	Customer selects Credit/Debit Card.
2. Payment Order	Backend creates payment order with gateway.
3. Secure Card Entry	Customer enters card details on PCI-compliant gateway page/SDK.
4. Authentication	3-D Secure / OTP authentication where applicable.
5. Authorization	Issuer approves or declines transaction.
6. Webhook Verification	Verify gateway signature and payment status.
7. Order Confirmation	Mark order as paid, generate invoice and notify customer.
8. Settlement	Reconcile settlement with gateway reports.

Architecture

Use a PCI-compliant payment gateway or hosted fields. The Pramo Jewels platform never stores raw card numbers, CVV or PINs.

Business Rules

Generate unique payment references, use idempotency keys, expire incomplete transactions after a configurable timeout and prevent duplicate captures.

Security

Enforce HTTPS/TLS, tokenize payment methods where supported, validate webhook signatures, protect API keys in a secrets manager and comply with PCI DSS requirements.

Failure Handling

Handle declined, timed-out and pending transactions gracefully. Support customer retries without creating duplicate orders.

Refunds

Support full and partial refunds through the payment gateway with automatic synchronization to the order lifecycle.

Monitoring

Track authorization success rate, settlement status, chargebacks, refund turnaround time, webhook health and payment latency.

Integrations

Integrates with Cart, Checkout, Orders, Inventory, Notifications, Accounting, Analytics and Fraud Detection services.

Acceptance Criteria

Card payments are processed securely, payment states remain synchronized, reconciliation is accurate and all payment events are audit logged.
