

Pramo Jewels

Folder Structure Standards

Document ID: PJ-FOLDER-001
Version: 1.0
Status: Approved for Development

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Standardize project directory structures across frontend, backend and infrastructure
Audience	Developers, Architects, DevOps Engineers, AI Coding Agents
Version	1.0

1. Repository Layout

frontend/
backend/
docs/
infra/
scripts/
shared/
.github/

2. Frontend Structure

app/
components/
features/
services/
store/
hooks/
types/
utils/
styles/
public/
tests/

3. Backend Structure

app/
Http/
Models/
Services/
Repositories/
Policies/
Jobs/
Events/
Listeners/
Notifications/
database/

routes/
tests/

4. Infrastructure

docker/
nginx/
terraform/ (future)
k8s/ (future)
monitoring/
backups/

5. Naming Standards

Use lowercase folder names, kebab-case for feature directories, PascalCase for React components, singular model names and descriptive file names.

6. Module Organization

Each business module should contain its own controllers, services, validation, tests and documentation where appropriate. Avoid cross-module dependencies.

7. Asset Organization

Separate images, icons, fonts, videos and 3D assets. Organize media by collection and SKU to simplify maintenance.

8. Documentation

Store architecture, API, database and deployment documentation under /docs using version-controlled Markdown and exported PDFs.

9. Testing Structure

Mirror production folders inside test directories. Separate unit, integration and end-to-end tests.

10. Governance

New folders require architectural justification. Keep the structure consistent across all environments and update documentation whenever structural changes are introduced.
