System	Create ticket and notify support team
Success	Issue resolved and user notified

6. Admin Operations

Aspect	Details
Trigger	Admin login
Flow	Dashboard → Products/Inventory/Orders → Update Data → Save
System	Validate permissions, audit log every critical action
Success	Business data updated

General Flow Principles

Every flow should minimize user effort, provide immediate feedback, preserve entered data where possible, display meaningful error messages, and maintain security throughout authentication, payment and account management.
