

Pramo Jewels

High-Fidelity UI Specifications

Document ID: PJ-HIFI-001

Version: 1.0

Status: Draft

Field	Value
Project	Pramo Jewels Premium E-Commerce Platform
Purpose	Define visual implementation specifications for production UI
Audience	UI Designers, Frontend Developers, QA, AI Coding Agents
Version	1.0

Screen Specifications

Screen	High-Fidelity Requirements
Homepage	Luxury hero, featured collections, subtle 3D accents, trust section, testimonials, new arrivals.
Collection Listing	Responsive filter sidebar, sort controls, product cards, pagination/infinite scroll.
Product Detail	Image gallery + 3D viewer, price, variants, delivery estimate, reviews, related products.
Cart & Checkout	Step indicator, address, shipping, payment (UPI/Card/COD), order summary, confirmation.
Customer Dashboard	Orders, wishlist, addresses, profile, notifications, returns.
Admin Dashboard	Analytics cards, charts, quick actions, recent orders and alerts.

Visual Standards

Use the approved color palette, typography, iconography and spacing tokens. Jewellery imagery remains the visual focus with subtle premium motion.

Component Behaviour

Define default, hover, focus, active, disabled, loading and error states for every interactive component.

Responsive Specifications

Provide optimized layouts for desktop (1440px), tablet (768–1024px) and mobile (360–430px) while preserving hierarchy and usability.

Accessibility

Meet WCAG 2.2 AA, maintain keyboard support, visible focus indicators, semantic structure and accessible forms.

Motion & 3D

Apply approved motion system. Use tasteful 3D interactions only where they improve product presentation and maintain performance targets.

Developer Notes

Reference design tokens, spacing scale, component names and reusable patterns. Each screen should map directly to frontend components.

Acceptance Criteria

Visual implementation matches approved Figma designs, components behave consistently, responsive layouts are verified and no critical accessibility issues remain.
